The rise of new digital industrial technology, known as Industry 4.0, is a transformation that makes it possible to gather and analyze data by machines, enable faster, more flexible, and more efficient processes to produce higher-quality goods at reduced costs. This manufacturing revolution will increase productivity, shift economics, foster industrial growth, modify the profile of the workforce and ultimately change the competitiveness among companies and regions. Advanced digital technology is already used in manufacturing, but with Industry 4.0, it will **transform** production. It will lead to greater efficiencies and change traditional production relationships among suppliers, producers, and customers as well as between human and machine. While many organizations are still in denial of how Industry 4.0 could influence their business or struggle to find the ways to adapt it for their unique cases, several others are implementing changes today and preparing for a future where smart machines improve their business. Here are some possible applications:

- Logistics and supply chains management
- Autonomous equipment and vehicles
- Robotics
- M2M (Machine-to-machine)
- Internet of Things (IoT)
- Cloud computing
- Additive manufacturing
- Artificial intelligence (AI)
- Cyber-physical system (CPS)

While Industry 4.0 is still developing, companies adapting the advanced technology realize the potential of Industry 4.0 such as lower operating costs, communication improvement, productivity development, wider customer base, collaboration and enhanced security.
